Inventory verification process

The accounting of the gold accounts of the Voima Gold service has been verified through the real-time electronic customer and account system.

Auditors have observed the counting of gold bars carried out in the vault. In the counting process, the accompanying letter of the refinery was compared with the markings stamped on the bars.

If consignments to be checked were in shipment while checking was being carried out, or if consignments were awaiting shipment, the documents of the consignments were checked, as were the deposit documents of the consignments awaiting shipment.

The ownership accounts managed by Voima Gold Oy in the systems of Voima Gold Oy's refinery partners have been verified using written confirmations provided by the partners, and have been taken into account in the counting process.

The amount of gold recorded in the electronic customer and accounting system has been compared with the gold bars in the vault of the company, and consignments in shipment or consignments awaiting shipment have been compared with the shipment documents and the deposit documents, and the gold in possession of the refinery partners have been compared with the written confirmations supplied by the partners. Through this process, it has been found that the amount of gold managed by Voima Gold Oy and stored in Voima Gold Oy's vault amounts, at least, to the amount of gold in grams in possession of the customers. PricewaterhouseCoopers Oy does not take a stance on the purity, quality or exact weight of the gold.
